

MEI IDX Software installed on all Akrion V3 Wet Stations
Software provides OEM with alternate software platform for low volume production

Albany, OR. December 15, 2005 – MEI LLC has IDX software installed onto all Akrion semi auto (V3 Models) as a control package. These systems are operational at sites throughout the world. The IDX Robotics software platform is used by multiple OEM's as the platform for their product lines. This puts IDX as one of if not the most widely used control package in batch immersion processes all over the world.

About MEI

MEI (formerly Marler Enterprises, Inc.) is an Oregon-based company that provides precision manufacturing products, systems, integration and support services to semiconductor and other high technology industries. Founded in 1990, MEI has grown in size and experience over the last 15 years and currently specializes in wet process systems and services, process tool rigging and crating systems, and clean room safety, ergonomic and support equipment.
